ABSTRACT OF THE DISCLOSURE

An apparatus is configured to be located on a frame of a patient support, the frame having a top surface configured to support a patient, the top surface having a length dimension and a width dimension. The apparatus includes an overlay positioned over the frame of the patient support, the overlay having an upper surface to support the patient and a lower surface configured to abut the top surface of the patient support. The overlay has a width dimension greater than the width dimension of the top surface. A retainer maintains the overlay in a desired position on the frame.
